

National ACDS WIL Forum:

Work-integrated learning (WIL) in Science

Where: [Parkroyal, Melbourne Airport](#)

When: Friday, 11 December 2015, 10.00am to 4.00pm

Join discipline leaders and TL champions from across Australia at this inaugural national forum to launch the new **WIL in Science** network.

***WIL in Science** is a leadership network that aims to help science faculties to embed work-integrated learning and increase student employability. The development of the WIL in Science leadership network has been made possible through a grant from the Office of the Chief Scientist, through its National Adviser, Science and Maths Education and Industry, Dr Roslyn Prinsley. It builds from two recent reports from the Office of the Chief Scientist* on the state of work-integrated learning in science. The WIL in Science network welcomes faculty WIL leaders to an ongoing program of peer learning and sharing good practice.*

Science Faculties are invited to nominate 2 or 3 leaders responsible for the development and/or delivery of WIL programs in science or mathematics, as delegates to the Forum and members of the new network.

Forum Themes

- **WIL in Science:** What does work-integrated learning look like in science and mathematics now?
- **The employment landscape:** How do employers want to interact with universities? Where are the jobs of the future?
- **Models for WIL in university degrees:** What can WIL in Science look like?
- **Leadership and organization:** What do Faculties need to do to improve WIL uptake? What will help them succeed?

RSVP to kally.kneale@deakin.edu.au with delegate details (name, email, dietary requirements).
No registration fee; numbers are limited but we will attempt to include all interested stakeholders.
